

AERONAUTICAL MATERIAL SPECIFICATION

Society of Automotive Engineers, Inc.
29 West 39th Street
New York City

AMS5036B

Issued 4-1-43

Revised 3-1-51

STEEL SHEET AND STRIP, ALUMINUM COATED Low Carbon

1. ACKNOWLEDGMENT: A vendor shall mention this specification number and its revision letter in all quotations and when acknowledging purchase orders.

2. APPLICATION: Primarily for low stressed parts, such as brackets, clips, and sheathing, requiring corrosion resistance and oxidation resistance up to 1200 F.

3. COMPOSITION (Basis Steel):

		Check Analysis	
		Under Min	or Over Max
Carbon	0.10 max	--	0.03
Manganese	0.25 - 0.50	0.03	0.03
Phosphorus	0.040 max	--	0.01
Sulfur	0.050 max	--	0.01

4. CONDITION: Made from cold rolled sheet, then rerolled after coating.

5. TECHNICAL REQUIREMENTS:

5.1 Coating: Shall consist of a uniform layer of aluminum on each side of the steel sheet.

5.2 Corrosion Resistance: Material shall show no evidence of corrosion of the basis steel when subjected to salt spray test in accordance with ASTM B117-49T for 200 hours. Corrosion of basis steel at cut edges shall be disregarded.

5.3 Bending:

5.3.1 Material shall withstand, without flaking or peeling of the coating, bending at room temperature through an angle of 180 degrees around a diameter equal to two times the nominal thickness of the material, with axes of bends both perpendicular and parallel to the direction of rolling.

5.3.2 Material shall withstand, without cracking of the basis steel, bending at room temperature flat on itself, with axis of bend parallel to the direction of rolling.

6. QUALITY: Material shall be uniform in quality and condition, commercially straight and flat, clean, sound, smooth, and free from foreign materials and from internal and external defects detrimental to fabrication or to performance of parts.

7. TOLERANCES: Unless otherwise specified, thickness and width tolerances shall conform to the following:

Section 5 of the SAE Technical Board rules provides that: "All technical reports, including standards, are advisory only. Their use by anyone engaged in industry or trade is entirely voluntary. There is no agreement to adhere to a SAE standard or recommended practice, and no commitment to conform to or be guided by any technical report. In formulating and approving technical reports, the Board and its Committees will not investigate or consider patents which may apply to the subject matter. Prospective users of the report are responsible for protecting themselves against liability for infringement of patents."

7.1 Thickness:

<u>Nominal Thickness, Inch</u>	<u>Tolerance, Inch, Plus and Minus</u>
Under 0.020	0.003
0.020 to 0.029, incl	0.004
Over 0.029 to 0.049, incl	0.005
Over 0.049 to 0.069, incl	0.006
Over 0.069 to 0.079, incl	0.007
Over 0.079 to 0.089, incl	0.008
Over 0.089	0.009

7.2 Width: Table III in the latest issue of AMS 2232.

8. REPORTS:

- 8.1 Unless otherwise specified, the vendor of the product shall furnish with each shipment three copies of a report of the results of tests for chemical composition of the steel in each heat in the shipment. This report shall include the purchase order number, heat number, material specification number, thickness, size and quantity from each heat.
- 8.2 Unless otherwise specified, the vendor of finished or semi-finished parts shall furnish with each shipment three copies of a report showing the purchase order number, material specification number, contractor or other direct supplier of material, part number, and quantity. When material for making parts is produced or purchased by the parts vendor, that vendor shall inspect each lot of material to determine conformance to the requirements of this specification, and shall include in the report a statement that the material conforms, or shall include copies of laboratory reports showing the results of tests to determine conformance.
9. IDENTIFICATION: Unless otherwise specified, each sheet and a strip shall be marked in the respective location indicated below, with AMS 5036B, manufacturer's identification, and nominal thickness in inches. The characters shall be not less than 3/8 in. in height and shall be applied using a suitable marking fluid. The characters shall be sufficiently stable to withstand ordinary handling.
- 9.1 Flat Sheet, and Flat Strip over 6 in. in Width: Shall be marked in lengthwise rows of characters recurring at intervals not greater than 2 ft. the rows being spaced not more than 3 in. apart and alternately staggered.
- 9.2 Flat Strip 6 in. and Under in Width: Shall be marked near one end.
- 9.3 Coiled Sheet and Coiled Strip: Shall be marked near the outside end of the coil.
