

SURFACE VEHICLE STANDARD

J1654 OCT2012

Issued 1994-06
Revised 2012-10

Superseding J1654 SEP2004

Unshielded High Voltage Primary Cable

RATIONALE

Added, "unshielded" to the title and scope for clarification of the specification.

Allowed voltages up to 1000 V DC or AC rms

Updated definition of plastic and referenced ASTM D-833 versus ASTM F-1251

Removed non-applicable definitions

Removes SAE J1292 from related or referenced specifications

Updated definition of thermoset

Updated format and spelling in Figure 1

Clarified text in Clauses 5.4 and 5.5 and Figure 2

Added values for 1000 V Cable to Figure 1

SAE Technical Standards Board Rules provide that: "This report is published by SAE to advance the state of technical and engineering sciences. The use of this report is entirely voluntary, and its applicability and suitability for any particular use, including any patent infringement arising therefrom, is the sole responsibility of the user."

SAE reviews each technical report at least every five years at which time it may be revised, reaffirmed, stabilized, or cancelled. SAE invites your written comments and suggestions.

1. SCOPE

This SAE Standard covers unshielded cable intended for use at a nominal system voltage up to 600 V or 1000 V (AC rms or DC). It is intended for use in surface vehicle electrical systems.

2. REFERENCES

2.1 Applicable Documents

The following publications form a part of this specification to the extent specified herein. Unless otherwise indicated, the latest issue of SAE publications shall apply.

ISO 6722 Road vehicles - 60 V and 600 V single core cables - Test methods, dimensions and requirements

ISO 14572 Road vehicles - Round, screened and unshielded, 60 V and 600 V multicore sheathed cables - Basic and high performance test methods and requirements

3. DEFINITIONS

3.1 ADDITIONAL MASS (ref. "Resistance to Sandpaper Abrasion" test)

The mass which is applied to the support rod. The combination of the forces exerted by the additional mass and the 0.63 N exerted by the remaining apparatus (bracket, support rod, and pivoting arm) is applied to the cable.

3.2 COATED WIRE

Wire comprised of a given metal covered with a relatively thin application of a different metal. (ASTM B 354)

3.3 CABLE

See primary cable.

3.4 CABLE FAMILY

A group with multiple conductor sizes having the same conductor strand coating, insulation formulation, and wall thickness type.

3.5 CONDUCTOR

A wire or combination of wires not insulated from one another, suitable for carrying an electrical current. (ASTM B 354)

3.6 CONDUCTOR SIZE

See "SAE Conductor Size".

3.7 CORE

One of the components in an assembly. A component may be an uninsulated conductor, an insulated conductor, a twisted pair, a shielded assembly, a coaxial cable, or any finished cable.

3.8 FLUID COMPATIBILITY

The ability of a cable to resist the effects of various fluids found in surface vehicles.

3.9 HOT PLATE

An electrically heated device used to test thermoset cables.

3.10 LOW VOLTAGE (Low Tension)

Usually considered to be ≤ 60 V DC (25 V AC).

3.11 MINIMUM WALL (Thickness)

The lowest allowable insulation thickness at any point.

SAENORM.COM : Click to view the full PDF of j1654-201210

3.12 NOMINAL

Name or identifying value of a measurable property by which a conductor or component or property identified, and to which tolerances may be applied.

3.13 PLASTICS

A material that contains as an essential ingredient one or more organic polymeric substances of large molecular weight, is solid in its finished state, and, at some stage in its manufacture or processing into finished articles, can be shaped by flow.

3.14 PRIMARY CABLE

The single or multi-stranded, single conductor, insulated cable used to carry electric current, by attachment to the low voltage side of an ignition coil in surface vehicles.

3.15 RESISTANCE TO OZONE

The ability of a material to withstand the deteriorating effect of ozone (surface cracking). (Dictionary of Materials and Testing)

3.16 SAE CONDUCTOR SIZE

A system that indicates the cross sectional area of the conductor. The "SAE Conductor Size" is the approximate area of the conductor.

3.17 SEPARATOR

A thin layer used as a barrier to prevent mutually detrimental effects between different components of a cable such as between the conductor and insulation or between the insulation and the sheath. (IEC, Electricity, Electronics and Telecommunications, Multilingual Dictionary)

3.18 STRIP FORCE

The peak axial force required to overcome the adhesion between the conductor and the insulation.

3.19 STRAND

See "Wire".

3.20 TCR, Temperature Class Rating

A class designation based on the retention of "Mechanical Properties" (tensile and elongation) after 168 h of heat aging at 30 °C above the temperature class rating.

3.21 Thermoplastic

A plastic capable of being softened by heating and hardened by cooling through a temperature range characteristic of the plastic and, in the softened state, capable of being repeatedly shaped by flow into articles by molding, extrusion or forming. (IEC, Electricity, Electronics and Telecommunications, Multilingual Dictionary)
