**Internal Combustion Engines—Piston Rings—
Rectangular Rings With Narrow Ring Width**

This SAE Standard is equivalent to ISO Standard 6622/2 TR.

1. Scope—Differences, where they exist, are shown in Appendix A.

This SAE Standard specifies the essential dimensional features of R, B, and M rectangular piston ring types with narrow ring width.

Dimensional Tables 8 and 9 allow for the use of cast iron (Table 8) or steel (Table 9). Since the modulus of elasticity of steel rings is higher than that of cast iron rings, the fluctuation in the surface pressure will become greater if the free gap is set as the reference for force. Therefore, forces are set using the surface pressure as the reference, in order to minimize the effect of the fluctuation.

The requirements of this document apply to rectangular rings for reciprocating internal combustion engines up to and including 90 mm diameter for cast iron rings and up to and including 100 mm diameter for steel. They may also be used for piston rings of compressors working under similar conditions.

1.1 Rationale—SAE J1998 is being discontinued because the content of this standard is also contained in ISO 6622-2. Therefore, to eliminate duplication and confusion in coordinating the standards between ISO and SAE, this document will be discontinued. The SAE Piston and Ring Standards Committee will now continue to support ISO in updating the standards as appropriate.

SAE Technical Standards Board Rules provide that: "This report is published by SAE to advance the state of technical and engineering sciences. The use of this report is entirely voluntary, and its applicability and suitability for any particular use, including any patent infringement arising therefrom, is the sole responsibility of the user."

SAE reviews each technical report at least every five years at which time it may be reaffirmed, revised, or cancelled. SAE invites your written comments and suggestions.

1. TR refers to Technical Report

3. Ring Types and Designation Examples

3.1 Type R—Straight Faced Rectangular Ring

3.1.1 GENERAL FEATURES

NOTE—See Table 8 or Table 9 for dimensions and forces.

FIGURE 1—TYPE R

3.1.2 DESIGNATION EXAMPLE—Designation of a straight faced rectangular ring with narrow ring width of $d_1 = 60$ mm nominal diameter, $h_1 = 1.2$ mm ring width made of spheroidal graphite cast iron heat-treated (material subclass 51), general features as shown in Figure 1, and periphery chromium coated fully faced design 0.1 mm minimum thickness:

a. Piston ring SAE J1998 R-60 x 1.2-MC51/CR2

3.2 Type B—Barrel Faced Rectangular Ring

3.2.1 GENERAL FEATURES

NOTE—See Table 8 or 9 for dimensions and forces.

*See Table 1.

FIGURE 2—TYPE B

TABLE 1—GAUGE WIDTH (h_g) AND BARREL DIMENSIONS

Dimensions in millimeters				
h_1	h_s	t_2, t_s	t_2, t_s	Maximum Peak Off Center
1.2	0.6	0.001	0.013	0.2
1.5	0.8	0.002	0.016	0.25

3.2.2 DESIGNATION EXAMPLE—Designation of a barrel faced rectangular ring with narrow ring width of $d_1 = 60$ mm nominal diameter, $h_1 = 1.2$ mm ring width made of steel (material subclass 62), general features as shown in Figure 2, and periphery chromium coated fully faced design 0.1 mm minimum thickness:

a. Piston ring SAE J1988 B-60 x 1.2-MC62/CR2

3.3 Type M—Taper Faced Rectangular Ring

3.3.1 GENERAL FEATURES

NOTE—See Table 8 or 9 for dimensions and forces.

*See Table 2.

FIGURE 3—TYPE M

TABLE 2—TAPER UNCOATED AND COATED RINGS (MOLYBDENUM OR CHROMIUM WITH TAPERED PERIPHERY GROUND)

Taper	Tolerance ⁽¹⁾	Tolerance ⁽¹⁾	With IF or IW ⁽²⁾ (Top Side) Tolerance ⁽¹⁾	With IF or IW ⁽²⁾ (Top Side) Tolerance ⁽¹⁾
M2	30'	+50'	30'	+60'
M3	60'	0	60'	0

1. For coated rings with tapered periphery not ground, the tolerance shall be increased by 10' (e.g., M3 = 60': +60' for M-rings or -70' for M-rings with IF or IW).

0 0

2. IF and IW are explained in Figures 16 and 17.

3.3.2 DESIGNATION EXAMPLE—Designation of a taper faced rectangular ring with narrow ring width of $d_1 = 60$ mm nominal diameter, $h_1 = 1.2$ mm ring width made of spheroidal graphite cast iron, heat-treated (material subclass 51) general features as shown in Figure 3 with taper M3 = 60' and periphery chromium coated fully faced design 0.1 mm minimum thickness:

- a. Piston ring SAE J1998 M3-60 x 1.2-MC51/CR2

4. Common Features

4.1 Type R—Straight Faced Rectangular Ring

4.1.1 UNCOATED RINGS

FIGURE 22—OUTSIDE AND INSIDE ROUNDED EDGES

FIGURE 23—DETAILS OF FIGURE 22

4.7 R, B, and M Rings (Fully Faced, Semi-Inlaid, and Inlaid)—Layer Thickness

NOTE—See Table 5 for dimensions.

FIGURE 24—LAYER THICKNESS

TABLE 5—LAYER THICKNESS

Dimensions in millimeters		
Chromium	Molybdenum	Thickness min
CRF	—	0.005
CR1	MO1	0.05
CR2	MO2	0.1
CR3 ⁽¹⁾	MO3 ⁽¹⁾	0.15

1. CR3 and MO3 apply to rings with nominal diameters of 50 mm or greater.

5. **Force Factors**—The tangential and diametral forces given in Table 8 shall be corrected when additional features and/or materials other than grey cast iron with a modulus of elasticity of 100 000 MPa are being used.

For common features, multiplier correction factors given in Tables 6 and 7 and the force correction factors given in SAE J1591 shall be used.

Also the tangential and diametral force given in Table 9 shall be corrected when additional features are being used.
